CHILDWIN Making research easy.

Hi, I'm Lewis.

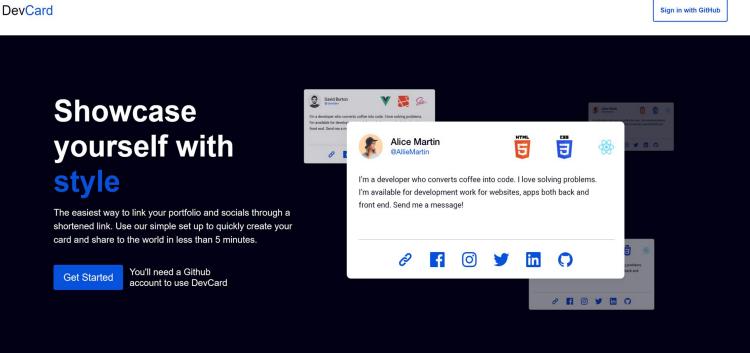

Based in Bournemouth, I build lightning fast applications and websites for clients of many walks of life. I'm at my happiest learning new technologies and applying them to create useful solutions to everyday hassles.

I started programming when I was 11 years old and have loved it ever since: starting with general purpose traditional languages like Python and C# and later going on to specialise in web languages so I could create a whole range of applications.

I specialise in PHP (Laravel), Javascript (Vue.js/ Nuxt/React) and CSS (SASS/Tailwind/Bulma). But I often use other languages, technologies and frameworks to make the best version of a site that's possible.

S Ц П **PREVIOUS PAGE**

DevCard is a way for developers to showcase their skills with style. It offers a fast interface to add in your details, skillset and social media links so someone can find out everything about you using a short link. Whether that be an employer, your team, or a client.

The project started as a URL shortener and evolved into an alternative to link tree out of need for something to put in an Instagram bio.

DevCard utilises Laravel, Vue.js and the Stripe to create a fast and intuative experience for users of the site.

Step One

Sign in to DevCard using your GitHub account to get started with a basic card featuring your username, profile link and avatar.

Step Two

Customise your card easily using our editor. Make it your own with a custom colour scheme and all of your important links.

Step Three

Get your unique link to display on social media or simply send to clients and other developers. It will be there forever, for free.

DevCard has and always will be completely and totally free. If you

Chloe.

Illustrator

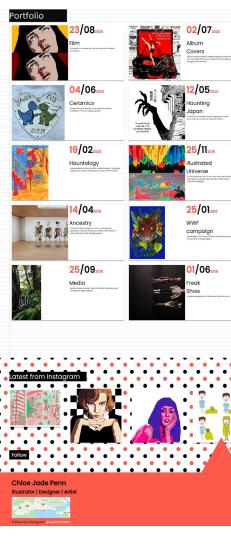

Chloe Penn is a talented illustrator from Bournemouth who needed a portfolio site to showcase her work.

I built an easy to manage, stylish website that would not only show off her skills but also give a platform to sell it on with an ecommerce element so visitors can purchase tote bags and other products.

The site now is home to dozens of projects with a large variety of artwork, gradually updated by Chloe.

"

as ers, is. ly sions ch! Red Squirrel Studio provided me with an open space to present my portfolio and sell my work. Being both a student and a small business owner, I needed a space to organise my work and present it in a way that reflects my style. Using the blog style portfolio feature has been incredibly useful and I was given complete freedom on putting posts together, captioning, and organising the project folders. The website is of high quality, clearly laid out, and in a way that serves to the needs of both my university work, and customers who need to find out about me and what I do. It is easy to navigate, and easy for me to edit and upload to, with the shop feature being accessible and straightforward for purchases.

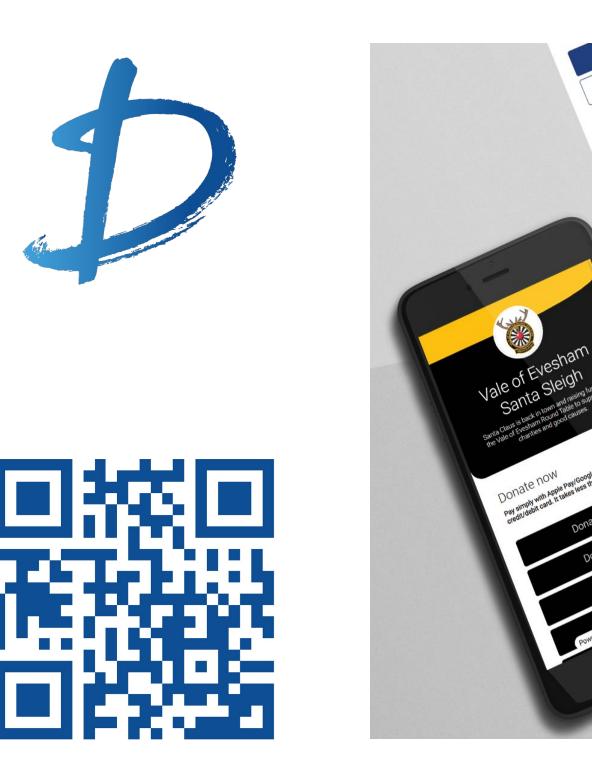

£20,000, that's the just the start of the impact an application can have for good.

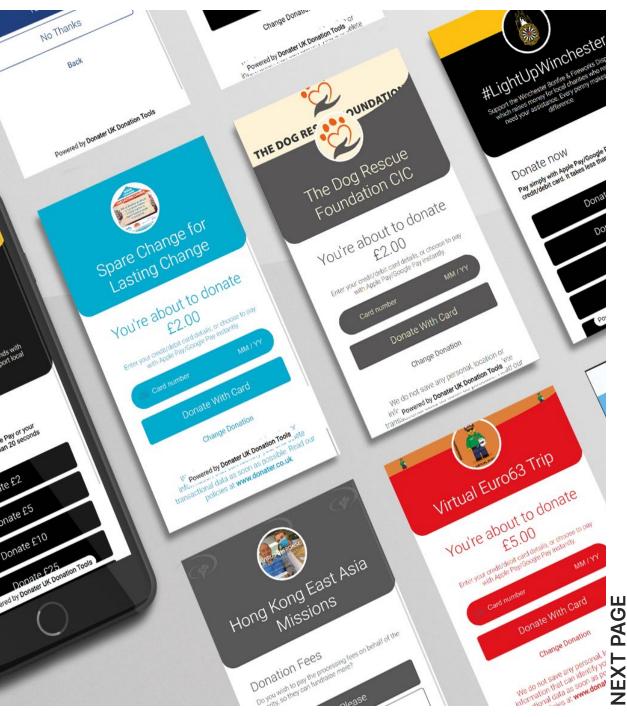

Donater is an application I have worked on with Sprechen that has helped dozens of charities in the South of England to raise money more easily. The web app can be accessed through QR code stickers on charity pots and lets the user donate using Google pay, Apple pay or direct debit if they don't have cash on hand.

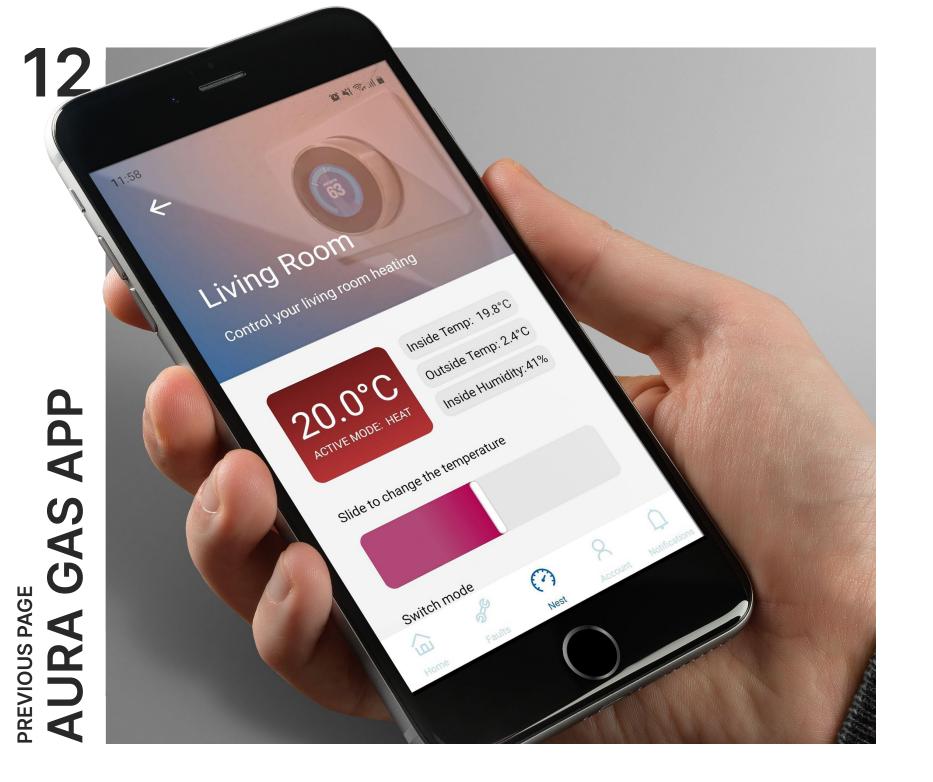

In an increasingly more cashless society, Donater has been a clear necessity for more and more charities who want to stray from traditional donation collection methods.

Information Bank The application would be able to keep track of their

cover plan, offer fix infomation for boiler faults, as well as integrate with their Google Nest thermostat so that they can control their heating.

Customers would be registered for the app when they take out cover with the company on their website and can login in immediately. The app was built in React native utilising a Laravel backend for data processing.

Admin / Cover Plans / List

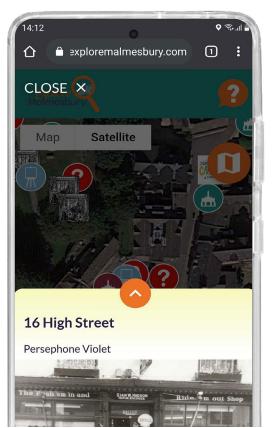

Explore Malmesbury was one of my first projects and built using Vue.js with a Laravel backend.

The site would provide a boost in tourist interest in Malmesbury, Wiltshire by offering information about points of interest, interactive panoramas and trail walk throughs.

It has been going strong for 3 years now and has given tourists visiting the town a means to learn about it and its history.

Go Fish Education is an app designed to help UK students prepare for the 11+ exam.

It features an avatar customiser in light of recent popular games incorperating the fetaure as well as hundreds of quizzes around Maths, English, Verbal and non-verbal reasoning.

The app was built in partnership with the Bournemouth based tuition company of the same name using Vue.js and Firebase to power it.

This site allowed me to push Nuxt to its limits by experimenting with Async configuration, full translations including urls, elastic search with facet filtering, and loading massive amounts of data from an api whilst optimising to keep speed in tact.

Pebeo is a global art supplies company based in Paris, France.

This site was built for them using Nuxt.js and provides translations for over 6 languages whilst hosting their entire range of products available for purchase on both the site and at other distributors.

Transmedia is an annual event held by the University of Winchester Digital Media Courses to showcase their work to potential employers, family, and friends. Historically, the event has been held in person on the University Campus but due to the pandemic had to be moved to a fully online experience.

I built this site with the capability of holding all the student's work and profiles, a 3D exhibition experience, and embedded live streams all to make 2021's Transmedia event amazing despite the situation.

The HYPER-LINK network is a project created by Next Gen Futures with the goal of connecting like minded people and allowing them to share their discoveries every week.

Before they contacted me, they were manually collecting links sent to them on Whatsapp by people and then sending them out at the end of the week.

To make this easier, I developed a chatbot for Telegram that could automate the process and collect member's links. At the end of the week it would match the users based on their interests and send their discoveries.

Some useful things to know.

Why should my child participate in your studies?

Our lab conducts research with children and families to understand children's and adolescents' social consumer and even one cognitive development with the aim of improving psychological wellbeing, relationships at home and school, and academic achievement. Our studies inform social policy as well as the work of educators and clinicians. When your child participates in one of our studies, they help scientific knowledge to advance while having a good time, and sometimes they may receive a gift from us.

What does participating in a study involve?

All our studies are run online, some are available any time in the form of online surveys, and others involve a scheduled video chat with one of our researchers. Each study will always begin in the same way: you and your child will learn what the research is about, and you both can decide whether or not you want to do it. In general, our studies involve completing fun activities, in the form of games, book reading, or discussing different topics. For some studies, your child will be asked to complete some of these activities on their own, in others parents will be asked to participate with their children, whereas other studies are for parents only.

Who will my child and I meet when we do a study involving a scheduled video chat?

For studies that involve a scheduled video chat, you will meet a researcher from our lab. All researc current DBS check. Every study has been approved by the Ethics Committee at the University of Wi

Is my child the right age for any of your studies?

We always have different studies examining children of different ages at any given time. Have a lo sign up to our mailing list and we will contact you whenever your child is the right age for one o

Admin Mode | Welcome, Lewi

The Winchester Child and Family Psychology lab aims to carry out studies relating to families and gain valiable research.

The E-Lab site would enable them to streamline the process through publishing contact forms, survey links so interested parents can easily sign up.

I built the site with the fact that the administrators are not tech savvy people in mind.

Pages were built with editable blocks where an admin could simply click on and edit images, text, and links without any sort of admin panel or technical knowledge.
